**COMMISSION DECISION****of 8 May 1996****establishing an inventory and a common nomenclature of ingredients employed in cosmetic products****(Text with EEA relevance)**

(96/335/EC)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

having regard to the Treaty establishing the European Community,

Having regard to Council Directive 76/768/EEC of 27 July 1976 on the approximation of the laws of the Member States relating to cosmetic products ⁽¹⁾, as amended by Commission Directive 95/34/EC ⁽²⁾, and in particular Article 5a and Article 7(2) thereof,

After consultation of the Scientific Committee on Cosmetology,

Whereas the inventory of ingredients used in cosmetic products must include a section on perfume and aromatic raw materials and a section on other substances;

Whereas this inventory must contain information on the identity of each ingredient, notably the chemical, INCI (ex-CTFA), Ph. Eur., INN and Iupac names, the EINECS/ELINCS, CAS and Colour Index numbers, the common name referred to in Article 7 (2) of Directive 76/768/EEC, as well as the ingredient's functions and, where appropriate, any restrictions and conditions of use and warnings which must be printed on the label;

Whereas, in addition to providing necessary information on the ingredients used in cosmetic products, the inventory must be seen in the context of the obligation laid down by Article 6 (1) of Directive 76/768/EEC, which stipulates indication on the product and/or packaging of the function of the product and the list of ingredients as of 1 January 1997 in the case of cosmetic products placed on the market;

Whereas the proposed inventory must be sufficiently complete to allow the labelling of ingredients for cosmetic products;

Whereas it shall, however, be indicative and shall not constitute a list of substances authorized for use in cosmetic products;

Whereas it must be periodically updated;

Whereas a common ingredients nomenclature will make it possible to identify the substances by using a single name in all the Member States, with the result that consumers will easily be able to recognize substances which they have been advised to avoid (for example because of allergies), no matter where they buy cosmetic products in the Community;

Whereas the INCI (International Nomenclature Cosmetic Ingredient) names best meet these requirements, being relatively simple and, moreover, already in use at international level;

Whereas the measures provided for in this Decision are in accordance with the opinion of the Committee on the Adaptation to Technical Progress of the Directives on the Removal of Technical Barriers to Trade in the Cosmetic Products Sector;

DECIDES:

Article 1

The inventory of ingredients used in cosmetic products provided for in Article 5a of Directive 76/768/EEC and reproduced in the Annex is adopted.

⁽¹⁾ OJ No L 262, 27. 9. 1976, p. 169.

⁽²⁾ OJ No L 167, 18. 7. 1995, p. 19.

▼B*Article 2*

The INCI (International Nomenclature Cosmetic Ingredient) names contained in the inventory shall constitute the common nomenclature for the purposes of Article 7 (2) of Directive 76/768/EEC.

ANNEX

INVENTORY OF COSMETIC INGREDIENTS

GENERAL INTRODUCTION

1. Council Directive 93/35/EEC of 14 June 1993 amending for the sixth time Directive 76/768/EEC on the approximation of the laws of the Member States relating to cosmetic products ⁽¹⁾ (hereafter called ‘cosmetic products Directive’) provides that the Commission shall, under the procedure involving the Committee on Adaptation to Technical Progress referred to in Article 10 of Directive 76/768/EEC, compile an inventory of ingredients employed in cosmetic products, on the basis in particular of information supplied by the industry concerned. The inventory shall be indicative and shall not constitute a list of substances authorized for use in cosmetic products.

The inventory must be divided into *two sections* concerning:

- perfume and aromatic raw materials,
- other substances.

The inventory must contain information concerning the identity of the ingredient, notably: the INCI (ex CFTA), Ph. Eur., INN, Iupac and chemical names, the EINECS/ELINCS, CAS and Colour Index numbers, the common name referred to in Article 7 (2) of the amended Directive 76/768/EEC, as well as the ingredient's functions and any mandatory restrictions, conditions of use and warnings.

In addition to the relevance of having information on the ingredients used in cosmetic products, whose safety has to be guaranteed, the inventory must be seen in the context of the obligation laid down by the new Article 6 (1) (Article 1 (7) of Directive 93/35/EEC) which makes it mandatory to indicate on the product and/or packaging (for the list) *the function of the product and the list of ingredients* as of 1 January 1997 for cosmetic products placed on the market.

Directive 93/35/EEC also provides that Member States may require that the ingredients be indicated in a language easily understood by the consumer and that to this end the *Commission must adopt a common ingredients nomenclature* in accordance with the CATP procedure (Article 1 (10) of Directive 93/35/EEC amending Article 7 (2) of Directive 76/768/EEC).

This common nomenclature will make it possible to identify the substances by using a unique name in all the Member States with the result that consumers will easily be able to recognize substances which they have been advised to avoid (for example because of allergies), no matter where they buy cosmetic products in the European Union.

Pursuant to Commission Decision of ..., all the INCI names constitute the common nomenclature.

2. The inventory proposed by the Commission includes the two sections provided for in Directive 93/35/EEC, namely:
 - a list of cosmetic ingredients other than perfume and aromatic raw materials (Section 1),
 - and
 - a list of perfume and aromatic raw materials (Section 2).

The proposed inventory is the best that could be achieved in the very short time limits imposed by Directive 93/35/EEC. The aim was that it should be sufficiently complete to permit cosmetic products to be labelled and also as correct and detailed as possible.

However, Article 1 (4) (3) of Directive 93/35/EEC specifies that the inventory must be periodically updated.

SECTION I

COSMETIC INGREDIENTS OTHER THAN PERFUME AND AROMATIC RAW MATERIALS*Introduction*

This list has been prepared in particular on the basis of information provided by the European Cosmetic Industry represented by the European Cosmetic Toiletry and Perfumery Association (COLIPA).

The list covers all items foreseen under Article 5a of the cosmetic products Directive concerning identity, usual function(s), and restrictions on cosmetic ingredients. The ingredients are listed in the alphabetical order of the INCI names, which constitute together the common nomenclature for labelling throughout the EU.

The following fields are included:

1. INCI name

This refers to the common nomenclature for ingredient labelling on the packaging of cosmetic products. The conventions used for the nomenclature are attached.

The abbreviation 'INCI' stands for International nomenclature for cosmetic ingredients. It refers to a new terminology developed by COLIPA to take into account the need for a truly international approach. It should be noted that Article 5a of the cosmetic products Directive refers to CTFA, which has been replaced by INCI as the correct designation for the nomenclature. An INCI name may cover several chemical entities.

For cosmetic colorants, the colour index (CI) number or the name listed in Annex IV has to be used for ingredient labelling, as indicated in Article 6(1) (g) of the cosmetic products Directive. The CI number therefore becomes the INCI name for these ingredients.

2. INN name

This abbreviation refers to the International non-proprietary name recommended by the World Health Organisation. It is listed where applicable.

3. Ph. Eur. name

This abbreviation refers to the name in the European pharmacopoeia. It is listed where applicable.

4. CAS number

This abbreviation refers to the code number developed by the Chemical Abstracts Service. The CAS number is a worldwide code enabling identification of chemical substances. It is listed when available.

5. EINECS/ELINCS number

This refers to the numerical code provided either under the European inventory of existing commercial chemical substances (EINECS) for existing chemicals or under the European List of Notified Chemical Substances (ELINCS) for new chemicals. It is listed where applicable.

6. Chemical/IUPAC name

This field covers the chemical name and the IUPAC (International Union of Pure and Applied Chemistry) name. It covers EINECS names, which make use of the IUPAC nomenclature, or CAS names, which clearly offer a suitable identification of the ingredient. Both items have been combined to avoid duplication.

7. Restriction

This field refers to ingredients covered under the Annexes of the cosmetic products Directive, in an abbreviated format. (*e.g.* III/1, 16 means Annex III, Part 1, No 16). The list covers all references to the Annexes up to and including Commission Directive 2000/11/EC adapting the Annexes of the cosmetic products Directive to technical progress. However, banned substances from the Directives 2002/34/EC, 2004/93/EC, 2005/42/EC and 2005/80/EC have been deleted.

Regular updates of this field will be essential as the Annexes to the Directive are adapted to technical progress.

▼ M1**8. Function**

This field refers to the usual function(s) of the ingredient as used in cosmetic products; an ingredient may have several functions.

The listed functions are defined as follows:

ABRASIVE

Removes materials from various body surfaces or aids mechanical tooth cleaning or improves gloss.

ABSORBENT

Takes up water- and/or oil-soluble dissolved or finely dispersed substances.

ANTICAKING

Allows free flow of solid particles and thus avoids agglomeration of powdered cosmetics into lumps or hard masses.

ANTICORROSIVE

Prevents corrosion of the packaging.

ANTIDANDRUFF

Helps control dandruff.

ANTIFOAMING

Suppresses foam during manufacturing or reduces the tendency of finished products to generate foam.

ANTIMICROBIAL

Helps control the growth of micro-organisms on the skin.

ANTIOXIDANT

Inhibits reactions promoted by oxygen, thus avoiding oxidation and rancidity.

ANTIPERSPIRANT

Reduces perspiration.

ANTIPLAQUE

Helps protect against plaque.

ANTISEBORRHOEIC

Helps control sebum production.

ANTISTATIC

Reduces static electricity by neutralising electrical charge on a surface.

ASTRINGENT

Contracts the skin.

BINDING

Provides cohesion in cosmetics.

BLEACHING

Lightens the shade of hair or skin.

BUFFERING

Stabilises the pH of cosmetics.

BULKING

Reduces bulk density of cosmetics.

▼ M1**CHELATING**

Reacts and forms complexes with metal ions which could affect the stability and/or appearance of cosmetics.

CLEANSING

Helps to keep the body surface clean.

COSMETIC COLORANT

Colours cosmetics and/or imparts colour to the skin and/or its appendages. All colours listed are substances on the positive list of colorants (Annex IV to the Cosmetics Directive).

DENATURANT

Renders cosmetics unpalatable. Mostly added to cosmetics containing ethyl alcohol.

DEODORANT

Reduces or masks unpleasant body odours.

DEPILATORY

Removes unwanted body hair.

DETANGLING

Reduces or eliminates hair intertwining due to hair surface alteration or damage and, thus, helps combing.

EMOLLIENT

Softens and smooths the skin.

EMULSIFYING

Promotes the formation of intimate mixtures of non-miscible liquids by altering the interfacial tension.

EMULSION STABILISING

Helps the process of emulsification and improves emulsion stability and shelf-life.

FILM FORMING

Produces, upon application, a continuous film on skin, hair or nails.

FOAMING

Traps numerous small bubbles of air or other gas within a small volume of liquid by modifying the surface tension of the liquid.

FOAM BOOSTING

Improves the quality of the foam produced by a system by increasing one or more of the following properties: volume, texture and/or stability.

GEL FORMING

Gives the consistency of a gel (a semi-solid preparation with some elasticity) to a liquid preparation.

HAIR CONDITIONING

Leaves the hair easy to comb, supple, soft and shiny and/or imparts volume, lightness, gloss, etc.

HAIR DYEING

Colours hair.

▼ M1**HAIR FIXING**

Permits physical control of hairstyle.

HAIR WAVING OR STRAIGHTENING

Modifies the chemical structure of the hair, allowing it to be set in the style required.

HUMECTANT

Holds and retains moisture.

HYDROTROPE

Enhances the solubility of substance which is only slightly soluble in water.

KERATOLYTIC

Helps eliminate the dead cells of the stratum corneum.

MASKING

Reduces or inhibits the basic odour or taste of the product.

MOISTURISING

Increases the water content of the skin and helps keep it soft and smooth.

NAIL CONDITIONING

Improves the cosmetic characteristics of the nail.

OPACIFYING

Reduces transparency or translucency of cosmetics.

ORAL CARE

Provides cosmetic effects to the oral cavity, e.g. cleansing, deodorising, protecting.

OXIDISING

Changes the chemical nature of another substance by adding oxygen or removing hydrogen.

PEARLESCENT

Imparts a nacreous appearance to cosmetics.

PLASTICISER

Softens and makes supple another substance that otherwise could not be easily deformed, spread or worked out.

PRESERVATIVE

Inhibits primarily the development of micro-organisms in cosmetics. All preservatives listed are substances on the positive list of preservatives (Annex VI to the cosmetics Directive).

PROPELLANT

Generates pressure in an aerosol pack, expelling contents when the valve is opened. Some liquefied propellants can act as solvents.

REDUCING

Changes the chemical nature of another substance by adding hydrogen or removing oxygen.

REFATTING

Replenishes the lipids of the hair or of the top layers of the skin.

▼ M1**REFRESHING**

Imparts a pleasant freshness to the skin.

SKIN CONDITIONING

Maintains the skin in good condition.

SKIN PROTECTING

Helps to avoid harmful effects to the skin from external factors.

SMOOTHING

Seeks to achieve an even skin surface by decreasing roughness or irregularities.

SOLVENT

Dissolves other substances.

SOOTHING

Helps lightening discomfort of the skin or of the scalp.

STABILISING

Improves ingredients or formulation stability and shelf-life.

SURFACTANT

Lowers the surface tension of cosmetics as well as aids the even distribution of the product when used.

TANNING

Darkens the skin with or without exposure to UV.

TONIC

Produces a feeling of well-being on skin and hair.

UV ABSORBER

Protects the cosmetic product from the effects of UV light.

UV FILTER

Filters certain UV rays in order to protect the skin or the hair from harmful effects of these rays. All UV filters listed are substances on the positive list of UV filters (Annex VII to the Cosmetics Directive).

VISCOSITY CONTROLLING

Increases or decreases the viscosity of cosmetics.

AVENA SATIVA PROTEIN			134134-87-5		Avena Sativa Protein is a protein obtained from the kernels of oat, Avena sativa, Poaceae		Soothing/moisturising/abrasive/absorbent/hair conditioning/skin conditioning/viscosity controlling
AVENA SATIVA PROTEIN EXTRACT			134134-87-5		Avena Sativa Protein Extract is an extract of the protein of the oat, Avena sativa, Poaceae		Skin conditioning
AVENA SATIVA STARCH			9005-25-8	232-679-6	Starch. High-polymeric carbohydrate material usually derived from the grains of the cereal oat, Avena sativa, Poaceae		Viscosity controlling
AVERRHOA CARAMBOLA EXTRACT			97675-54-2	307-626-6	Averrhoa Carambola Extract is an extract of the fruit of Averrhoa carambola, Oxalidaceae		Skin protecting
AVOCADAMIDE DEA			124046-21-5		Avocado amides, N,N-bis(2-hydroxyethyl)-		Emulsifying/emulsion stabilising/surfactant/viscosity controlling/foam boosting
AVOCADAMIDOPROPALKONIUM CHLORIDE			124046-04-4		1-propanaminium, N,N-dimethyl-N-phenylmethyl-3-[(1-oxoavocado)amino]-, chloride		Antistatic
AVOCADAMIDOPROPYL BETAINE			246865-42-9		1-Propanaminium, 3-amino-N-(carboxymethyl)-N, N-dimethyl, N-avocado-oil acyl derivatives, inner salts		Surfactant/cleansing/foam boosting
AVOCADAMIDOPROPYL DIMETHYLAMINE			226994-25-8		Amides, avocado oil, N-[3-(dimethylamino)propyl]		Antistatic
AVOCADO OIL PEG-11 ESTERS			103819-44-9		Oils, avocado, ethoxylated, 11 mol EO (average molar ratio)		Emollient
AZELAIC ACID			123-99-9	204-669-1	Nonanedioic acid		Buffering
AZELAMIDE MEA			242132-61-2		Nonanoic acid, 9-[(2-hydroxyethyl)amino]-9-oxo-,		Surfactant/foam boosting/viscosity controlling
AZULENE			275-51-4	205-993-6	Bicyclo[5.3.0]decapentaene		Soothing
BABASSUAMIDE DEA			124046-24-8		Babassu amides, N,N-bis(2-hydroxyethyl)-		Surfactant/foam boosting

BABASSUAMIDO-PROPYL BETAINE			223704-95-8		1-Propanaminium, 3-amino-N-(carboxymethyl)-N, N-dimethyl-, N-babassu-oil acyl derivatives, inner salt		Surfactant/foam boosting/ cleansing
BABASSUAMIDO-PROPYL DIMETHYLAMINE			223707-87-8		Amides, babassu oil, N-[3-(dimethylamino)propyl]-		Antistatic
BABASSUAMIDO-PROPYLAMINE OXIDE			124046-26-0		Propane, 1-dimethylamino-3-[(1-oxobabassu)amino]-, N-oxide		Surfactant/foaming/cleansing
BAKUCHIOL			17015-60-0		Phenol, 4-(3-ethenyl-3,7-dimethyl-1,6-octadienyl)-, (E)-		Antimicrobial
BAMBUSA ARUNDINACEA EXTRACT			91771-32-3	294-922-2	Bambusa Arundinacea Extract is an extract of the stems of the bamboo, Bambusa arundinacea, Poaceae		Skin conditioning
BAMBUSA ARUNDINACEA POWDER					Bambusa Arundinacea Powder is the powder obtained from the dried, ground stems of Bambusa arundinacea, Poaceae		Abrasive
BAMBUSA VULGARIS EXTRACT			91771-33-4	294-923-8	Bambusa Vulgaris Extract is an extract of the leaves and stems of the bamboo, Bambusa vulgaris, Poaceaea		Humectant
BAPTISIA TINCTORIA					Baptisia Tinctoria is a plant material derived from the roots of the wild indigo, Baptisia tinctoria, Leguminosae		Tonic
BAPTISIA TINCTORIA EXTRACT			84775-46-2	283-875-3	Baptisia Tinctoria Extract is an extract of the roots of the wild indigo, Baptisia tinctoria, Leguminosae		Tonic
BARIUM SULFATE			7727-43-7	231-784-4	Barium sulphate (CI 77120)		Opacifying
BARIUM SULFIDE			21109-95-5	244-214-4	Barium sulphide	III/1,23	Depilatory
BAROSMA BETULINA EXTRACT			84649-93-4	283-474-3	Barosma Betulina Extract is an extract of the roots of Barosma betulina, Rutaceae		Skin conditioning

CASSIA AURICULATA LEAF POWDER			97593-53-8	307-359-5	Cassia Auriculata Leaf Powder is a powder of the dried, crushed leaves of <i>Cassia auriculata</i> , Leguminosae		Skin conditioning
CASSIA ITALICA EXTRACT		<i>sennae folium/ sennae fructus</i>	85085-71-8	285-393-9	Cassia Italica Extract is an extract of the leaves of the senna, <i>Cassia italica</i> , Leguminosae		Skin conditioning
CASSIA SENNA EXTRACT			92202-21-6	296-053-4	Cassia Senna Extract is an extract of the leaves of <i>Cassia senna</i> , Leguminosae		Skin conditioning
CASTANEA SATIVA EXTRACT			84695-99-8	283-619-0	Castanea Sativa Extract is an extract of the leaves of the chestnut, <i>Castanea sativa</i> , Fagaceae		Soothing
CASTOR OIL BENZOATE			225927-34-4		Castor oil, benzoate		Skin conditioning/emollient
CASTOR OIL/IPDI COPOLYMER			68955-90-8		Castor oil, polymer with 5-isocyanato-1-(isocyanatomethyl)-1,3,3-trimethylcyclohexane		Film forming

CAULERPA TAXIFOLIA EXTRACT			223749-77-7		Caulerpa Taxifolia Extract is an extract of the algae, Caulerpa taxifolia, Caulerpaceae		Skin protecting
CAULOPHYLLUM THALICTROIDES			84929-23-7	284-507-4	Caulophyllum Thalictroides is a plant material derived from the dried rhizomes and roots of the blue cohosh, Caulophyllum thalictroides, Berberidaceae		Tonic
CEANOOTHUS AMERICANUS EXTRACT			91771-46-9	294-937-4	Ceanothus Americanus Extract is an extract of the herb of the ceanothus, Ceanothus americanus, Rhamnaceae		Cleansing
CEDRUS ATLANTICA EXTRACT			92201-55-3	295-985-9	Cedrus Atlantica Extract is an extract of the bark of Cedrus atlantica, Pinaceae		Tonic
CEDRUS ATLANTICA OIL			8000-27-9		Cedrus Atlantica Oil is the volatile oil obtained from the bark of Cedrus atlantica, Pinaceae		Tonic
CELLULOSE	cellulose	<i>cellulosum</i>	9004-34-6	232-674-9	Cellulose		Absorbent/opacifying/viscosity controlling/bulking
CELLULOSE ACETATE	cellulose acetate		9004-35-7		Cellulose, acetates		Film forming
CELLULOSE ACETATE BUTYRATE	cabufocon a		9004-36-8		Cellulose, acetates, butanoates		Film forming
CELLULOSE ACETATE PROPIONATE			9004-39-1		Cellulose, acetates, propanoates		Film forming
CELLULOSE ACETATE PROPIONATE CARBOXYLATE			125139-16-4		Cellulose, acetates, propanoates, reaction products with ozone		Surfactant
CELLULOSE GUM	carmellose		9004-32-4		Cellulose, carboxymethyl ether, sodium salt		Binding/emulsion stabilising/film forming/viscosity controlling
CENTAUREA CYANUS					Centaurea Cyanus is a plant material derived from the dried flowers of the cornflower, Centaurea cyanus, Compositae		Moisturising/skin conditioning/soothing

CENTAUREA CYANUS WATER					Centaurea Cyanus Water is an aqueous solution of the odoriferous principles of the flowers of <i>Centaurea cyanus</i>		Moisturising/skin conditioning/soothing
CENTAURIUM ERYTHRAEA EXTRACT			84837-00-3	284-285-9	Erythraea Centaurium Extract is an extract of the herb of the centaur, <i>Erythraea centaurium</i> , Gentianaceae		Skin conditioning
CENTELLA ASIATICA EXTRACT			84696-21-9	283-640-5	Centella Asiatica Extract is an extract of the leaves and roots of the of the hydrocotyl, <i>Centella asiatica</i> , Apiaceae		Smoothing/soothing/ cleansing/tonic
CEPHALINS			39382-08-6	254-438-4	Cephalins	II/419, if from bovine, ovine or caprine origin	Skin conditioning
CERA ALBA	wax, yellow	<i>cera alba/cera flava</i>	8012-89-3	232-383-7	Beeswax. The wax obtained from the honeycomb of the bee. It consists primarily of myricyl palmitate, cerotic acid and esters and some high-carbon paraffins		Emollient/emulsifying/film forming
CERA CARNAUBA		<i>cera carnauba</i>	8015-86-9	232-399-4	Carnauba wax. The wax derived from <i>Copernicia cerifera</i> , Arecaceae		Emollient/film forming
CERA MICROCRIS- TALLINA			63231-60-7	264-038-1	Paraffin waxes and Hydrocarbon waxes, microcryst.. A complex combination of long, branched chain hydrocarbons obtained from residual oils by solvent crystallization. It consists predominantly of saturated straight and branched chain hydrocarbons predominantly greater than C35		Binding/emulsion stabilising/ opacifying/viscosity controlling
CERAMIDE 1			100403-19-8	309-560-3	1,3,4-Octadecanetriol, 2-stearoyloxy-heptacosamide		Hair conditioning/skin conditioning
CERAMIDE 1 A			179186/48/2		9,12-Octadecadienoic acid, 27-[[2,3-dihydroxy-1-(hydroxymethyl)-heptadecyl]amino]-27 oxoheptacosyl ester, [1S-[1R*(9Z,12Z), 2R*, 3S*]]-		Hair conditioning/skin conditioning

DEA-C8-18 PERFLUOROALKY- LETHYL PHOSPHATE			223239-91-6		Phosphoric acid, .gamma.-.omega.-perfluoro-C10- 20-alkyl esters, compounds with diethanolamine		Surfactant/emulsifying
DEA-C12-13 ALKYL SULFATE			243133-68-8		Bis-(2-hydroxyethyl)ammonium (C12-13)-alkylsul- fate		Surfactant/cleansing
DEA-C12-13 PARETH- 3 SULFATE			243133-69-9		Bis-(2-hydroxyethyl)ammonium poly(oxy-1,2-etha- nediy)-.alpha.-(C12-13)-alkyl-.omega.-sulfate, (3 mol EO average molar ratio)		Surfactant/cleansing
DEA-C12-15 ALKYL SULFATE					Sulfuric acid, C12-C15-alkyl ester, 2,2'-iminobi- sethanol salt		Surfactant/foaming/cleansing
DEA-CETEARETH-2 PHOSPHATE			162567-77-3	500-766-0	Alcohols, C16-18, ethoxylated, phosphates, bis(2- hydroxyethyl) ammonium salts (2 mol EO average molar ratio)		Emulsifying
DEA-CETYL PHOS- PHATE			69331-39-1	273-968-7	1-Hexadecanol, phosphate, compd. with 2,2'- iminobis[ethanol] (1: 1)		Surfactant/emulsifying
DEA-CETYL SULFATE			51541-51-6	257-260-5	Bis(2-hydroxyethyl)ammonium hexadecyl sulphate		Surfactant/emulsifying
DEA-COCOAMPHO- DIPROPIONATE					Beta-alanine, N-(2-aminoethyl)-N-[2-(2-carbox- yethoxy)ethyl]-, N-coco acyl derivs., 2,2'-iminobi- sethanol salts		Surfactant/foam boosting/ hydrotrope/cleansing
DEA-CYCLOCAR- BOXYPROPY- LOLEATE			84195-78-8	282-385-7	5(or 6)-carboxy-4-hexylcyclohex-2-ene-1-octanoic acid, compound with 2,2'-iminodiethanol		Surfactant/emulsifying
DEA-DODECYLBEN- ZENESULFONATE			26545-53-9	247-784-2	Dodecylbenzenesulphonic acid, compound with 2,2'- iminodiethanol (1:1)		Surfactant/foaming/cleansing
DEA-HYDROLYZED LECITHIN			91053-51-9	293-317-0	Lecithins, reaction products with diethanolamine		Emulsifying
DEA-ISOSTEARATE			93920-28-6	300-113-8	Isooctadecanoic acid, compound with 2,2'-imino- diethanol (1:1)		Surfactant/cleansing/emulsi- fying
DEA-LAURAMINO- PROPIONATE			65104-36-1	265-417-4	N-dodecyl-.beta.-alanine, compound with 2,2'-imino- diethanol (1:1)		Antistatic/hair conditioning

SECTION II

PERFUME AND AROMATIC RAW MATERIALS

1. Introduction

These lists are representative of the basic materials used in perfumes and aromatic compositions. The lists were compiled mainly on the basis of information provided by EFFA (European Flavour and Fragrance Association). They constitute the inventory of fragrance ingredients.

2. Identity of fragrance ingredients

Fragrance ingredients do not need a common nomenclature because the fragrance or their ingredients (perfume and aromatic compositions and their raw materials) must be indicated on the labels using the words 'perfume' or 'flavour' (Article 6 (1) (g) of the cosmetic products Directive). Hence the information on the identity of these substances consists of a chemical name identifying the substances in the clearest possible way. Such a system already exists in the 'acquis communautaire' — namely the Einescs inventory ('European Inventory of Existing Commercial Chemical Substances'), (*Official Journal of the European Communities* No C 146A of 15 June 1990) and Elincs ('European List of Notified Chemical Substances'), whose most recent version was published in *Official Journal of the European Communities* No C 361 of 17 December 1994. These publications mainly contain the information necessary to describe a chemical substance in an unequivocal manner, *i.e.* a chemical name, a CAS number and an Einescs number. These lists also include substances of unknown structure, of variable composition or of biological origin (so-called UVCB substances). This is why the inventory of fragrance ingredients was compiled on the basis of the Einescs system. The other identifiers mentioned in Directive 93/35/EEC cannot be applied (CTFA name, European Pharmacopoeia name, names recognized by the World Health Organization, Colour Index number). The Iupac identifier is covered by the Einescs identifier. When substances have not been included in the Einescs system, only the CAS number and CAS name have been indicated.

3. Function of fragrance ingredients

The function of all ingredients included in this inventory is to perfume. Certain ingredients however may have several functions. Substances used in fragrances for their properties in mixtures (solvents, excipients, etc.) are also included in the list. According to Article 6 (1) (g) of the cosmetic products Directive, these substances may be considered as part of the fragrance and do not have to be declared as a cosmetic ingredient, provided they are not used in excess of the recommended levels.

4. Restrictions applicable to fragrance ingredients

Restrictions on the use of a given ingredient are identified wherever relevant. These restrictions are set out in the Directive itself or in the IFRA (International Fragrance Association) Code of Practice. These restrictions may take the form of a quantitative limitation (expressed as a percentage of the final product or as a concentration for application to the skin), or the ingredient may have to meet certain specifications or may only be used in conjunction with certain specified ingredients. These substances are marked in the list with one asterisk (*) (IFRA restrictions) or two asterisks (**) (restrictions in the cosmetic products Directive).

5. The fragrance inventory as a representative list

It should be noted that in this inventory the various qualities of a given ingredient, such as geraniol, have not been recorded separately; the same applies to different qualities of natural products with the same botanical origin. Orange oils from Brazil, Florida, California, etc., concentrated or otherwise, are all indicated under a single entry, *i.e.* 'sweet orange extractives', CAS 8028-48-6, Einescs 232-433-8. This rubric is defined as follows: 'Extractives and their physically modified derivatives such as tinctures, concretes, absolutes, essential oils, oleoresins, terpenes, terpene-free fractions, distillates, residues, etc. obtained from *Citrus sinensis*, Rutaceae'. Neither does the inventory include ingredients whose chemical identity is secret and constitutes the intellectual property of a fragrances manufacturer. These substances are not sold as such but used exclusively in fragrance compositions, generally at low concentrations to give them a certain characteristic and/or exclusiveness.

Einecs/Elincs No:	232-362-2
CAS No:	8007-47-4
Name:	Balsams, Canada. Extractives and their physically modified derivatives. It consists primarily of resins, essential oils, and usually cinnamic and benzoic acids. (<i>Abies balsamea</i> , <i>Tsuga canadensis</i> , <i>Pinaceae</i>).
Einecs/Elincs No:	232-370-6
CAS No:	8008-74-0
Name:	Oils, sesame. Extractives and their physically modified derivatives. It consists primarily of the glycerides of the fatty acids linoleic, oleic, palmitic and stearic. (<i>Sesamum indicum</i> , <i>Pedaliaceae</i>).
Einecs/Elincs No:	232-383-7
CAS No:	8012-89-3
Name:	Beeswax The wax obtained from the honeycomb of the bee. It consists primarily of myricyl palmitate, cerotic acid and esters and some high-carbon paraffins.
Einecs/Elincs No:	232-384-2
CAS No:	8012-95-1
Name:	Paraffin oils. Liquid hydrocarbons from petroleum.
Einecs/Elincs No:	232-395-2
CAS No:	8013-75-0
Name:	Fusel oil. A combination of amyl alcohols, primarily isoamyl alcohol and 2-methyl-1-butanol. Other alcohols, acids, esters and aldehydes may also be present.
Einecs/Elincs No:	232-396-8
CAS No:	8013-90-9
Name:	ionone
Einecs/Elincs No:	232-400-8
CAS No:	8015-89-2
Name:	<i>Cascara sagrada</i> , ext. Extractives and their physically modified derivatives such as tinctures, concretes, absolutes, essential oils, oleoresins, terpenes, terpene-free fractions, distillates, residues, etc., obtained from <i>Rhamnus purshiana</i> , <i>Rhamnaceae</i> .
Einecs/Elincs No:	232-403-4
CAS No:	8016-21-5
Name:	Oils, cognac
Einecs/Elincs No:	232-427-5
CAS No:	8023-83-4
Name:	Oils, castoreum. Extractives and their physically modified derivatives such as proteins, carbohydrates, lipids, nucleic acids, inorganic ions, etc. obtained from castor.
Einecs/Elincs No:	232-432-2
CAS No:	8028-47-5
Name:	Pyroligneous acids, exts. Extracts derived from pyroligneous acid which is the condensed volatile material obtained from the destructive distillation of wood.

CAS No:	8028-48-6
Name:	Orange, sweet, ext. Extractives and their physically modified derivatives such as tinctures, concretes, absolutes, essential oils, oleoresins, terpenes, terpene-free fractions, distillates, residues, etc., obtained from <i>Citrus sinensis</i> , <i>Rutaceae</i> .
Einecs/Elincs No:	232-444-8
CAS No:	8030-55-5
Name:	Balsams, gurjun. Extractives and their physically modified derivatives. It consists primarily of resins, essential oils, and usually cinnamic and benzoic acids. (<i>Dipterocarpus</i> , <i>Dipterocarpaceae</i>).
Einecs/Elincs No:	232-449-5
CAS No:	8030-89-5
Name:	Pyroligneous acids, reaction products with Et alc., distillates The distillate from the reaction products of the aqueous distillate from the destructive distillation of wood and ethyl alcohol.
Einecs/Elincs No:	232-452-1
CAS No:	8031-44-5
Name:	Lanolin, hydrogenated
Einecs/Elincs No:	232-454-2
CAS No:	8038-65-1
Name:	Ambergris Irregularly shaped gray, waxy opaque masses from the intestines of the sperm whale. It consists primarily of cholesterol, ambrein, and benzoic acid.
Einecs/Elincs No:	232-455-8
CAS No:	8042-47-5
Name:	White mineral oil (petroleum). A highly refined petroleum mineral oil consisting of a complex combination of hydrocarbons obtained from the intensive treatment of a petroleum fraction with sulfuric acid and oleum, or by hydrogenation, or by a combination of hydrogenation and acid treatment. Additional washing and treating steps may be included in the processing operation. It consists of saturated hydrocarbons having carbon numbers predominatly in the range of C15 through C50.
Einecs/Elincs No:	232-458-4
CAS No:	8046-19-3
Name:	Storax (balsam) (*). Extractives and their physically modified derivatives. It is a product which may contain resin acids and their esters, terpenes, and oxidation or polymerization products of these terpenes. (<i>Liquidambar styraciflua</i> , <i>Hamamelidaceae</i>).
Einecs/Elincs No:	232-460-5
CAS No:	8046-22-8
Name:	Balsams, tonka bean. Extractives and their physically modified derivatives. It consists primarily of resins, essential oils, and usually cinnamic and benzoic acids. (<i>Dipteryx odorata</i>).

NOMENCLATURE CONVENTIONS

The conventions used for establishing INCI names are as follows:

1. In order to facilitate use and clarity, INCI names have been designed to require a minimum of punctuation and capitalisation.
2. Wherever new nomenclature has been adopted, every effort has been made to use the shortest name consistent with these rules.
3. Simple chemical names are used wherever possible.
4. Recognised chemical abbreviations are used where applicable. A list of the abbreviations used in the Inventory may be found under the section 'Abbreviations'.
5. Traditional stems are retained as combining forms when consistent with other systems (see rule 17).
6. Abbreviations are utilised for simplifying the nomenclature of families of complex ingredients when applicable (see abbreviation list under the section 'Abbreviations').
7. Compounds that are related or are similar to materials described in recognised sources are named, whenever possible, by analogy to the listed names.
8. Singly substituted derivatives do not usually include the prefix 'mono'. This term is used only when required to prevent ambiguity. The absence of a suitable prefix implies 'mono', e.g. Glyceryl stearate.
9. The term 'Glyceride' has been utilized to describe a monoglyceride. Mixtures of mono-, di- and triglycerides are referred to as 'Glycerides'. Triglycerides are assigned specific nomenclature, e.g. Tristearin.
10. Multiple substitution is routinely described with the appropriate prefix such as 'di-', 'tri-' or 'tetra-', e.g. Glyceryl distearate.
11. Names of ingredients, other than colours, that contain terminal numbers are generally hyphenated. Derivatives of hyphenated materials retain the original hyphen, e.g. Laureth-3, Laureth-3 phosphate.
12. Hydration states are not usually expressed.
13. Straight-chain alkyl groups are described by their common stem names (see rule 17).
14. Materials containing mixtures of even-carbon chain length fractions are named by the appropriate, commonly used fatty stem term, e.g. Cetearyl alcohol (C16 and C18). Materials containing mixtures of even- and odd-carbon chain length fractions are designated by alternative nomenclature, e.g. C12-15 alcohols (C12, C13, C14 and C15).
15. Branched-chain alkyl groups are usually described by the prefix 'iso' followed by the common stem name for the comparable straight-chain group (e.g. Isostearyl alcohol, Isocetyl alcohol) — see also rule 17. The major exception to this rule is the nomenclature for the 2-alkyl of Guerbet alcohols. These are named by standard chemical rules (e.g. Ethylhexanol, Octyldodecanol, Decyltetradecanol). Derivatives are named accordingly (e.g. Ethylhexyl myristate, Cetyl ethylhexanoate, Diethylhexylamine, Triethylhexanoin, Butyloctanoic acid).
16. The following table has been included to clarify the nomenclature for derivatives of caproic, caprylic and capric acids.

Chain length	Stem name	Acid	Ester	Acyl	Alkyl	Ampho
C6	Capro	Caproic	Caproate	Caprooyl	Caproyl	Caproo
C8	Capryl	Caprylic	Caprylate	Capryloyl	Caprylyl	Caprylo
C10	Capr	Capric	Caprate	Caproyl	Capryl	Capro

17. The following table describes the nomenclature applied to straight-chain acids and alcohols. Branched-chain acids and alcohols utilize the names listed in this table preceded by the term 'iso' (e.g. Isostearic acid). Guerbet alcohols, however, are designated by specific names (e.g. Octyldodecanol). (See also rule 15).

▼ **M1**

	Acid	Alcohol
<i>Saturated:</i>		
C6	Caproic	Hexyl
C7	Heptanoic	Heptyl
C8	Caprylic	Caprylyl
C9	Pelargonic	Nonyl
C10	Capric	Decyl
C11	Undecanoic	Undecyl
C12	Lauric	Lauryl
C13	Tridecanoic	Tridecyl
C14	Myristic	Myristil
C15	Pentadecanoic	Pentadecyl
C16	Palmitic	Cetyl
C17	Margaric	Heptadecyl
C18	Stearic	Stearyl
C20	Arachidic	Arachidyl
C22	Behenic	Behenyl
<i>Unsaturated:</i>		
C11	Undecylenic	Undecylenyl
C16	Palmitoleic	Palmitoeyl
C18	Oleic	Oleyl
C18	Linoleic	Linoleyl
C18	Linolenic	Linolenyl
C20	Arachidonic	Arachidonyl
C22	Cetoleic	Cetoleyl
C22	Erucic	Erucyl

18. The nomenclature for ingredients consisting of mixtures of similar materials (e.g. fatty acids, fatty alcohols) is determined on the basis of the chemical identity of the raw material as purchased. Mixtures that reflect the original distribution of components due to their natural source (e.g. coconut) are named utilizing the source stem (e.g. coconut alcohol). If the original natural distribution has been significantly cut or enriched, the mixture is named on the basis of the predominant component.
19. Names of lanolin derivatives usually contain the stem 'lan', e.g. Laneth-60.
20. Because of the existing widespread use of these denominations, alkanolamides are named from the parent alkyl amide and the appropriate abbreviation for the amine used, e.g. Cocamide MEA.
21. The dimethyl term is omitted and is assumed in all alkyl dimethyl amine oxide names (e.g. Stearamine oxide). Tertiary amine oxides with different substituent groups are named completely (e.g. Dihydroxyethyl stearamine oxide).
22. Quaternary ammonium salts usually have the suffix '-ium' in the stem of the cation. The term 'monium' describes a monomethyl-substituted quaternary nitrogen; 'dimonium' describes a dimethyl-substituted quaternary nitrogen; 'trimonium' describes a trimethyl-substituted quaternary nitrogen.
23. The terms quaternium/polyquaternium are used to describe complex quaternary ammonium salts that do not have a common name or that cannot be named by analogy to established names (e.g. Quaternium-82, Polyquaternium-20).
24. The term 'ampho' has been used as a combining term in the nomenclature for amphoteric surfactants derived from imidazoline intermediates. In naming these compounds, this stem is combined with the appropriate stem names for the substituent groupings (e.g. Sodium Cocoamphoacetate).
25. Common fatty stem terms are used to designate the alkyl portion of alkyl imidazoline compounds (e.g. Lauryl Hydroxyethyl Imidazoline) even though one carbon atom of the fatty radical becomes a member of the heterocyclic ring during the materials' manufacture.

26. Biological materials are named by specific terms (e.g. Hyaluronic Acid, Hydrogenated Menhaden Oil) when the material has been isolated, purified and chemically characterized. Alternative nomenclature for biologicals is utilized to name materials in accordance with the extent of their processing. They may have INCI names based on: (a) the Latin name of the genus, or (b) primarily on designations from Pharmacopoeias, followed by the part used if pertinent, and the type of preparation if pertinent (e.g. extract, oil, powder, etc.). For mammalian derived ingredients, usually (c) the INCI names are based on the English name of the part used, if pertinent (e.g. connective tissue, spleen, stomach, etc.) and the type of preparation, if pertinent (e.g. extract, oil).

Examples of INCI names for biologicals are (a) Brevoortia Oil; (b) Faex Extract; (c) Connective Tissue Extract.

27. Cosmetic colorants have INCI names according to the nomenclature used in Annex IV to Directive 76/768/EEC.
28. Hair dye ingredients are named according to chemical structure. In the event that chemical names are very complex, a colour/number combination is used prefixed by the letters 'HC'.
29. Denatured alcohols are designated by the INCI name 'Alcohol denat.'. Alcohol denat. is ethyl alcohol that is denatured with one or more denaturing agents in accordance with the national legislation of each Community Member State.
30. Materials derived from plants are known as botanicals. In general, these ingredients have not undergone chemical modifications and include plant derived ingredients such as extracts, juices, waters, distillates, powders, oils, unsaponifiables, etc. They have INCI names based on the international Linné designated nomenclature of the genus and the species, followed by the plant part, if pertinent or applicable (e.g. leaf, fruit, bark, etc.), and the type of preparation (e.g. extract, oil, powder, etc.). Chemical derivatives of botanicals follow the nomenclature rules for chemicals (e.g. Cocoglyderides, Hydrogenated Castor Oil, Hydrogenated Palm Acid, Olive Acid, Palm Alcohol, Soyamide DEA, Sulfated Olive Oil, etc.).

The following references are used to establish the Linné-derived for botanicals: (a) The primary reference is Penso, G., *Index Plantarum Medicinalium Totius Mundi Eorumque Synonymorum*, O.E.M.F. Milano (1983 — ISBN N° 88-7076-027-8). (b) When the genus and species is not identified in the text cited in (a), a variety of secondary sources are utilised including the following, in order of priority: (1) Steinmetz, E.F., *Codex vegetabilis*, Amsterdam (1957); (2) Hoppe, H.A., *Drogenkunde*, 8th Edition, Walter de Gruyter, Berlin, Volume 1 (1957 — ISBN N° 3-11-00-8), Volume 2 (1977 — ISBN 3-11-006660-2); (3) Mabberley, D.J., *The Plant Book — A portable dictionary of higher plants*, Cambridge 1992 — ISBN N° 0-521-34060-8; (4) Hoppe H.A., Levring T., Tnaka Y., *Marine Algae in Pharmaceutical Science*, Walter de Gruyter, Berlin, New York, 1979.

31. Name/number combinations are used as INCI names for cosmetic ingredients only where the complexity and/or similarity of ingredients precludes assignment of reasonable nomenclature by any other means. In all cases where arbitrary numbers are used, these numbers are preceded by names suggestive of the structure or the composition of the material. Each name/number combination represents a specific ingredient that is listed in the Inventory. The following name/number series of combinations have been used:

- (a) Benzophenone

This term is used for all benzophenone derivatives (e.g. Benzophenone-2).

- (b) HC colour

See rule 28.

- (c) Quaternium/Polyquaternium

See rule 23.

- (d) Hydrofluorocarbon/Hydrochlorofluorocarbon

These terms are used for hydrohalocarbon aerosol propellants (e.g. Hydrofluorocarbon 152a, Hydrochlorofluorocarbon 142b).

- (e) Polysilicone

common names or established conventions for silicone compounds (e.g. Polysilicone-1)

- (f) Polyacrylate-

see rule 49.

▼ **M1**

- (g) Polyester-
see rule 49.
- (h) Polyether-
see rule 49.
- (i) Polyurethane-
see rule 49.
32. Commercial raw materials are often deliberate mixtures of several components. The mixtures do not appear as such and must be identified by listing the individual components (e.g. Kathon CG: Aqua, Chloromethylisothiazolinone, Methylisothiazolinone, Magnesium chloride, Magnesium nitrate).
33. The INCI names for extracts represent the ‘material extracted’ and do not include reference to the extracting solvents and/or other diluents that may be present in these materials.
34. Solvents and/or diluents contained in commercially available raw materials such as surfactants, polymers and resins are not normally identified as part of the INCI name.
35. Polyethylene glycol (polyoxy-1, 2-ethanediyl) is abbreviated to the acronym ‘PEG’.

Polyethylene glycol homopolymers are named as PEG-X, where X is the average number of ethylene oxide monomer units, e.g. PEG-10.

Ethoxylated alcohols are named by combining the conventional alcoholic stem name with the suffix ‘eth’ followed by the average number of ethylene oxide monomer units, e.g. Laureth-10.

Esters of polyethylene glycol homopolymers are named as PEG derivatives, e.g. PEG-10 stearate.

Other ethoxylated substances are named accordingly, e.g. PEG-6 cocamide.

Because names based on the approximate molecular weight of the ethylene oxide polymer are also in common use, the following table is provided to allow easy conversion between the two systems:

Approximate Molecular Weight	Average Number of Monomer Units
100	2
200	4
300	6
400	8
450	9
500	10
600	12
1 000	20
1 540	32
1 800	36
2 000	40
3 000	60
4 000	75
6 000	150
8 000	180

36. Polypropylene glycol (polyoxy-1, 2-propanediyl) is abbreviated to the acronym ‘PPG’.

Polypropylene glycol homopolymers are named as PPG-X, where X is the average number of propylene oxide monomer units, e.g. PPG-10.

Esters and ethers of polypropylene glycol homopolymers are named as PPG derivatives, e.g. PPG-10 stearate, PPG-10 lauryl ether.

Other propoxylated substances are named accordingly.

▼ **M1**

37. PEG and PPG polymers or their derivatives in which one of the terminal primary alcohol groups (-CH₂OH) has been oxidised to a carboxylic acid (-COOH) are named by adding the term 'carboxylic acid' or 'carboxylate' to the parent name of the original polymer, e.g. PEG-10 carboxylic acid, Coceth-7 carboxylic acid, Ammonium laureth-8 carboxylate.
38. The term 'Pareth' applies to ethoxylated parffinic alcohols containing both even- and odd-carbon chain length fractions.
39. The term 'Acrylates' is used to describe linear, non-cross linked copolymers that contain combinations of acrylic acid, methacrylic acid and their methyl, ethyl, propyl or butyl esters. Similarly, the term 'Crotonate(s)' is used to describe the copolymers that contain combinations of crotonic acid and its methyl, ethyl, propyl or butyl esters.
40. The name 'Carbomer' is used to describe high molecular weight cross-linked homopolymers of acrylic acid. The cross-linking agent(s) is (are) identified in the ingredient entry definition. (See also rule 41)
41. The term 'cross-polymer' is used to describe polymers other than Carbomer that are cross-linked. (See also rule 40)
42. The term 'Poloxamer' denotes a symmetrical block copolymer formed by ethoxylation of polypropylene glycol. Substances with differing degrees of polymerisation are further identified by a code number derived from the molecular weight of the polymer.
43. The term 'Merxapol' denotes a symmetrical clock copolymer formed by the propoxylation of polyethylene glycol. Substances with differing degrees of polymerisation are further identified by a code number derived from the molecular weight of the polymer.
44. The term 'Poloxamine' denotes a symmetrical block copolymer formed by successively propoxylating then ethoxylating ethylene diamine. Substances with differing degrees of polymerisation are further identified by a code number derived from the molecular weight of the polymer.
45. Copolymers of ethylene glycol and propylene glycol which do not form symmetrical block copolymers are named as PEG/PPG-X/Y derivatives where X and Y are the average number of ethylene oxide and propylene oxide monomer units respectively.
46. The term 'Alkoxyno-n' means an ethoxylated alkyl phenol where n indicates the average number of ethylene oxide units.

When the name is:	the alkyl is:
octoxynol	tetramethylbutyl
nonoxynol	nonyl
dodoxynol	dodecyl
pentadoxynol	pentadecyl

47. Biotechnological materials are substances derived by the action of micro-organisms, such as bacteria or yeasts, on a substrate to produce materials by fermentation, metabolism, hydrolysis, lysis or other processes. The process may involve the use of nutrients or other materials such as enzymes. The resulting product is referred to as a 'culture' or 'ferment'. The ferment can be further processed by extraction, filtration, and/or other procedures to yield the final product.

The conventions used to provide INCI names for biotechnological materials are as follows:

- (a) When the end product produced from a given 'ferment' or 'culture' has a common or usual name, such name may be used, e.g. Yogurt, Gellan Gum or Xanthan Gum.
- (b) When the end product does not have a common or usual name, the product will be named using the genus of the micro-organism, followed by a slash and the name of the substrate (if applicable), followed by the work 'ferment'. Substrates will be identified by their common, usual, or other technical name, e.g. Lactococcus/Carrot Ferment. On a case-by-case basis, the genus and species name of the micro-organism may be used when the use of the genus only may be misleading and the identification of the species is needed for clarity, e.g. Candida bombicola Ferment.
- (c) If the selected components of the ferment have been isolated and purified to a significant extent and analytical evidence is provided, the name for one or more of the components may be used, e.g. Glycosphingolipids, Beta-Glucan or Dextran.

48. The term ‘Ceramide’ as part of an INCI name will be assigned to those classes and structures of natural lipids derived from skin as reported by Wertz P.W., Miethke M.C., Long S.A., Strauss J.M. and Downing D.T. in ‘*The composition of ceramides from human stratum corneum and from comedones*’, *The Journal of Investigative Dermatology*, 84, 410-412 (1985).

A synthetic N-acylated sphingoid base that is identical to any one of the many constituents of the natural ceramides, as reported by Wertz, will be assigned an INCI labelling name using the term ceramide followed by a number (e.g. Ceramide 3) or a number and Roman numeral (e.g. Ceramide 6II). The term ceramide as part of the INCI name will only be assigned to a synthetic N-acylated sphingoid base that contains, as the predominant component, the erythro isomer of at least one of the many natural ceramides described by Wertz. A predominant component is one that is present at the highest concentration in relation to other synthetic materials of similar structure and related composition present in a mixture.

Synthetic N-acylated sphingoid bases that do not have the erythro configuration, or otherwise are not constituents of natural ceramides as described by Wertz, will not be named using the term ceramide. In such cases, a chemical or other appropriate name, to be determined by the International Nomenclature Committee (INC) on a case-by-case basis, will be assigned as the INCI labelling name. The INC may accept a signed statement by a person requesting the assignment of an INCI name that a synthetic N-acylated sphingoid base is the erythro isomer and otherwise conforms in composition to the above criteria.

49. The term ‘Aminoacrylates’ refers to simple aminoacrylates, in which the substituted alkyl groups attached to amino nitrogen range from C1-4, and acrylates conforms to the definition as described in rule 33.
50. Synthetic peptides consisting of 2 to 10 amino acid residues are named using the appropriate prefix, di-, tri-, tetra-, etc., followed by the term peptide and an arbitrary number, e.g. Dipeptide-2.

Synthetic peptides consisting of 11 to 100 amino acids are designated by the term oligopeptide, followed by an arbitrary number.

Synthetic peptides consisting of more than 100 amino acids are designated by the term polypeptide, followed by an arbitrary number.

The amino acid residues composing the peptide are listed alphabetically in the entry definition in Section 1.

The amino acid residues may include the following:

Alanine	Glutamine	Phenylalanine
Arginine	Glycine	Proline
Asparagine	Histidine	Serine
Aspartic Acid	Isoleucine	Threonine
Cysteine	Leucine	Tryptophan
Cystine	Lysine	Tyrosine
Glutamic Acid	Methionine	Valine

51. Polymer nomenclature — Polymeric materials are named according to the name in common usage if it is well known, or by the structure if well defined. If no common name exists, and the structure is not well defined, the polymers are named according to their source, as described below.

Homopolymers (consisting of one constituent monomer) are named by placing the term ‘poly’ before the constituent monomer, e.g. Polyisobutene.

Copolymers and Crosspolymers (consisting of two or more constituent monomers) are named by listing the monomers separated by a slash (/) followed by the work ‘Copolymer’ or ‘Crosspolymer’, respectively, e.g. Acrylates/Acrylamide Copolymer, Acrylates/VA Crosspolymer.

Copolymers consisting of four or more monomers may be given an INCI name according to their class followed by an arbitrary number, e.g. Polyester-1, with the monomers listed in the entry definition of the material. Such nomenclature is granted at the discretion of the INC, with a purpose of shortening lengthy INCI names.

Thus far, the only classes of polymers to be created for this type of nomenclature are Polyesters, Polyacrylates and Polyurethanes. More classes may be added in the future, if the need arises.
