## PART IV

**Interpretation of codes used in tables in Parts II and III**

- = Importation of meat products containing meat of this species not authorized.

*Non-specific treatment regime*

- A = No minimum specified temperature of other treatment is established for animal health purposes for the meat product. However it must have undergone a treatment such that its cut surface shows that it no longer has the characteristics of fresh meat.

*Specific treatment regimes* — listed in descending order of severity

- B = Treatment in a hermetically sealed container to an  $F^{\circ}$  value of three or more.
- C = A minimum temperature of 80 °C which must be reached throughout the meat during the processing of the meat product.
- D = A minimum temperature of 70 °C which must be reached throughout the meat during the processing of meat products, or  
for ham, treatment consisting of natural fermentation and maturation of not less than nine months and resulting in the following characteristics:
  - $A_w$  value of not more than 0,93,
  - pH value of not more than 6,0.
- E = In the case of 'biltong' type products, a treatment to achieve:
  - $A_w$  value of not more than 0,93,
  - pH value of not more than 6,0.
- F = A heat treatment that ensures a centre temperature of at least 65 °C is reached for a period of time necessary to achieve a pasteurization value (pv) equal to or more than 40.

*NB:* Where the meat product has undergone a treatment other than heating in a hermetically sealed container to an  $F^{\circ}$  value of three or more, fresh meat used in the manufacture of the meat products referred to in Parts II and III must satisfy the animal health rules applicable to the export of fresh meat to the European Community.
