

## SCHEDULE 2

### METHODS OF ANALYSIS

## ANNEX III

### METHOD FOR DETERMINING ISOBUTYLIDENEDIUREA

#### Expression of the Results

6. The per cent content of isobutylidenediurea in the sample is given by the formula:

$$\frac{A}{W} \times 10$$

where:

- A = weight of isobutylidenediurea (mg) read from the calibration curve; and  
W = weight of sample in grams.
